New isolated NOVX polypeptide useful for treating atherosclerosis, metabolic disorders, diabetes, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease and cancer.

Claim 1; Page 303; 666pp; English.

The invention relates to human polypeptides, termed NOVX, and the polypurcleotides encoding them. The polypeptides and polynucleotides are useful for diagnosing disease, and screening for potential therapeutic agents. The sequences are useful for treating metabolic disorders, cardiomyopathy, diabetes, hypertension, congenital heart defects, action attrial septal defect (ASD), attrioventricular canal defect, ductus arteriosus, pulmonary stenosis, subaortic stenosis, ventricular septal defect (VSD), valve diseases, tuberous sclerosis, scleroderma, atherosclerosis, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, immune disorders, haematopoietic disorders, haemophilia, hypercoagulation, Crohn's disease and cancer. Sequences ABUS4542-ABUS4647 represent human NOVX polypeptides and cancer. of the inver invention

                                                                                The invention discloses a polymucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel control of the polymucleotide, an antibody binding to the polymucleotide or peptide or peptide or peptide of the polymucleotide, immunologically assaying the polypeptide or peptide of the polymucleotide, immunologically assaying the polypeptide or peptide of the polymucleotide by contacting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding compared the two, a transformant carrying the polymucleotide in an expressible manner and an antisense polymucleotide. The oligonucleotide is useful as a primer for synthesising the polymucleotide, or as a probe contacting the polymucleotide and encoded contacting the polymucleotide and encoded contacting the polymucleotide and encoded contacting the polymucleotide and encoded contacting the polymucleotide and encoded contacting the polymucleotide and encoded contacting the polymucleotide and encoded contactines for regulation of their expression and activity, or as targets confidence in the proteins, signal transduction-related proteins, disease-related proteins and genes are involved in tissue and/or cell contacting them can be used as indicators for diseases (e.g. osteoporosis, encoding them can be used as indicators for diseases (e.g. osteoporosis, concervitually or expression of the encoded protein to treat diseases. The sequence presented is a protein of the invention. Note: Some of the sequence data for this patent is not represented in the printed concervitual patent is based on sequence information supplied by the concervitual patent of encoded protein the printed concervitual patent is a protein of the invention.

The present sequence represents a cat cauxin protein (I) or its salt, which is cat kidney disease marker. Also described: (I) a partial peptide (II) of (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) comprising (III); (4) a transformed host (V) comprising (III) or (IV); (5) producing (I) or (II) by culturing (V); (6) a antibody (VI) which couples specifically with (I) or (II); (7) diagnosting cat kidney disease which involves measuring (I) quantitatively, and where reduction of amount of (I) indicates presence of the disease; (8) a cat kidney disease diagnostic agent comprising (I) labelling agent, a reagent which measures the biological activity of urinary (I) or (VI); and (9) a cauxin
                                                                                                                                                                                         Novel cauxin protein or its salt, useful as and for diagnosing cat kidney disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             detection kit which measures cauxin in a test sample. (I) is useful as a cat kidney disease marker and (VI) is useful for diagnosing cat kidney disease. (I) enables detection of cat kidney disease simply and correctly. (I) provides an early marker for the disease, and replaces complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, blood testing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            No . :

XX

PT Novel cauxin protein or its salt, useful as a cat kidney disease marker, PT and for diagnosing cat kidney disease.

XX

PT and for diagnosing cat kidney disease.

XX

PT and for diagnosing cat kidney disease.

XX

PT and for diagnosing cat kidney disease.

XX

PT and for diagnosing cat kidney disease marker. Also described: (1) or its salt, curve which is cat kidney disease marker. Also described: (1) a partial peptide (1); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV); (5) producing (I) or (II) by culturing (V); (6) a antibody (VI) (CI); (5) producing (I) or (II) by culturing (V); (6) a antibody (VI); (7); (8) producing (I) or (II); (7) diagnosing cat kidney (1) enables diagnostic agent comprising (I) plantitatively, and where reduction of amount of (I) indicates presence of the disease; (8) a cat kidney disease diagnostic agent comprising (I) labelling agent, a reagent which curve the biological activity of urinary (I) or (VI); and (9) a cauxin of detection kit which measures cauxin in a test sample. (I) is useful as a cat kidney disease marker and (VI) is useful for diagnosing cat kidney disease. (I) enables detection of cat kidney disease simply and correctly. (1) provides an early marker for the disease, and replaces complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, XX

Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, Parkinson's disease, Alzheimer's disease, infection, autoimmune disorder autoimmune disorder

Claim 1(a); Page 315; 335pp; English.

The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. The activity of polypeptides of the invention may be described as, compared to the invention may be described as, antiparkinsonian, nootropic, compared to the invention may be described as compared to the invention may be described as compared to the invention of the invention of the invention of the invention are compared to the invention are and metabolic. Polypeptides and polynucleotides of the invention are compared to the invention of

                                                                                The invention relates to a purified human carboxylesterase-like enzyme CC polypeptide. Carboxylesterase-like enzyme and its DNA are useful for CC screening for agents which decrease or modulate the activity of CC carboxylesterase-like enzyme polypeptide. Carboxylesterase-like enzyme is CC carboxylesterase-like enzyme polypeptide. Carboxylesterase-like enzyme is CC carboxylesterase-like enzyme is CC compounds that increase the ability of human carboxylesterase-like enzyme CC compounds that increase the ability of human carboxylesterase-like enzyme CC carboxylesterase-like enzyme agonist are useful as detoxifying agents. CC carboxylesterase-like enzyme agonists and antagonists are useful for treating osteoporosis, Paget's disease and degradation of bone implants, CC carboxylesterase-like enzyme is useful in CC diagnostic assays for detecting diseases and abnormalities or susceptibility to diseases or abnormalities related to the presence of coding sequence of carboxylesterase-like enzyme polynucleotide is useful in gene therapy and for generating antisense oligonucleotides or CC useful the pecifically bind to mRNA transcribed from carboxylesterase-like enzyme of carboxylesterase-like enzyme oligonucleotides are useful for modulating carboxylesterase-like enzyme oligonucleotides are useful sequence is rat carboxylesterase-like enzyme expression. The CC useful sequence is at carboxylesterase-like enzyme oligonucleotides are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁

The DNA and protein sequences are CC associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the CC isolation and characterisation of the DNA and protein sequences of the CC invention. The breast and ovarian cancer associated DNA, protein, agonist CC entragonist sequences exhibit cytostatic; immunosuppressive; nontropic; antiinflammatory; antivical; antiallergic; hepatotropic; antidiabetic; CC entiinflammatory; antivical; and cardiant activity. The polynucleotide and CC protein sequences are used in the diagnosis of cancer, particularly Drotein sequences are used in the diagnosis, prevention and treatment CC and agonists may also be used in the diagnosis, prevention and treatment CC immune disorders e.g. Addison's disease, allergies, autoimmune CC isease, multiple sclerosis, rheumatoid arthritis and ulcerative CC cardiovascular disorders such as myocardial ischaemias; wound healing; cardiovascular disorders such as cerebral anoxia and epilepsy; and

C;Function:
A;Bescription: catalyzes conversion of carboxylic ester to alcohol and carboxylic a;Description: catalyzes conversion of carboxylic ester to alcohol and carboxylic C;Superfamily: cholinesterase; cholinesterase homology
C;Keywords: carboxylic ester hydrolase; endoplasmic reticulum; glycoprotein; liver
F;1-18/Domain: signal sequence #status predicted <SIG>
